P R O J E C T S

Electronic Shop Automation
C Programming • 2021–2022

Description : The Electronic Shop Management System in C programming efficiently tracks electronic inventory, manages sales transactions, stores customer information, and generates Bills of sales. It simplifies stock monitoring, enhances customer service, and streamlines shop operations, ultimately improving efficiency and profitability.

Online Exam Plateform
PHP • 2023

Description : In my PHP project, I developed an online exam system where students can take tests remotely. The system allows administrators to create and manage exams, while students can login, select exams, and receive instant results. It's a convenient and efficient way for students to assess their knowledge from anywhere with an internet connection

Typing Practice website
JavaScript • 2023

Description : My typing practice website offers a user-friendly platform for practicing typing skills and taking typing tests without the need to log in. Users can improve their typing speed and accuracy by accessing a variety of exercises and tests, all conveniently available at their fingertips.

Snake and Ladder Game
JavaScript • 2023

Description : This is a classic board game that includes Climb ladders, beware of snakes, and race to the top to win.

Tic-tac-toe
JavaScript • 2023

Description : Tic Tac Toe: A classic game of strategy and skill. Dive into the timeless challenge of outsmarting your opponent in this iconic battle for victory
